Hello everyone-

At long last here is an invite to **Non-responsive** for Chuitna. Since I am granting you all access to the parent folder I have been told you should have access/edit privileges for all subfolders and documents. Please let me know if you have trouble accessing any of the materials. I have found that for some of the larger files I have to download them directly, as opposed to viewing them in the internet explorer pdf viewer. I have uploaded the preliminary draft sections we have reviewed to-date, and our comments, including the alternatives, proposed action, draft mitigation proposal, cumulative impacts approach and impacts summary table. I have also added some external reports and analysis on the project, the presentation from last week, and other materials that may provide useful background (1990 EIS/ROD/404 analysis, etc.). I did not upload all of the baseline reports. Rather, the Corps contractor AECOM will be sending each of you a username and password for accessing their Chuitna extranet site, which contains the baseline reports and other materials. That should be coming today or early next week. Please let me know if you have any questions and I will be reaching out to those of you who couldn't make the kick-off meeting sometime next week to touch base. Thanks.
